TEAM

Coordinating physician

Pneumo-allergist, Dr Catherine MBAZOA

Specialists

Clinical pathologist, Dr Nicolas DAOUD

Clinical nutrition

Dr Alexandra COLLARD

Dermato-allergist, Dr Said TAS

Dietician, Mrs Laura TERRUZZI

Internist, Prof Elie COGAN

Rhumatologist, Dr Joëlle MARGAUX

Gastroenterologists,

Dr Philippe LANGLET

Dr Alexandre SARAFIDIS

ENT-allergists,

Dr Cloé HUPIN

Dr Samuel LIPSKI

Dr Virginie MONNOYE

Paediatrician-allergist,

Dr Valérie RANSY

Dr Philippe CHAOUAT

Pneumo-allergists,

Dr Jacques DE KOSTER

Prof Olivier MICHEL

Inter-site collaborations

- **Clinique S^{te}-Anne S^t-Remi**
Pneumo-allergist, Dr Catherine ARS
- **Hôpital de Braine-I'Alleud**
Dermato-allergists,
Dr Gwendy Dupire, Dr Florence Dethier
- **Centre Médical Europe-Lambermont**
Pneumo-allergist, Dr Vlad VASILIU
- **Centre Médical du Parc Léopold**
Pneumo-allergist, Dr Catherine MBAZOA

PRESENTATION

According to the WHO, allergies are the 4th most common chronic disease in the world. Whether respiratory, drug, skin or even food allergies, there are many of them and they are constantly increasing. In addition, the number of people with an allergy in 2050 could be one in two...

Hôpital Delta therefore decided to set up a multidisciplinary immuno-allergology clinic with the collaboration of other Chirec sites, Clinique Ste-Anne St-Remi and Centre Médical Europe-Lambermont.

Multidisciplinarity is a major advantage because it allows the patient to receive overall care, whatever the organ(s) involved, both in adults and children.

WHAT DO WE DO?

We perform different types of allergic disease assessments.

- Respiratory allergology
- Food allergology and management
- Food intolerances: lactose, celiac and non-celiac hypersensitivity to gluten, intolerance to FODMAP
- Simple or complicated rhinosinusitis.
- Dermatological allergies: contact and skin allergies
- Hymenoptera venoms (bee, wasp, horsefly, etc.)

We test for allergies in the context of asthma, rhinitis, conjunctivitis, and food, drug and skin (contact) allergies by means of:

- Allergy skin tests
- Intradermal reaction (drugs; bee, wasp, horsefly venom, etc.)
- Patch tests
- Oral and subcutaneous (food and drug) challenge tests
- Nonspecific conjunctival, nasal and bronchial challenge tests
- Oesophageal biopsy (examination for eosinophilic oesophagitis)
- Specific laboratory tests (Immuno-CAP, CAP-ISAAC, baso-test)

THERAPEUTIC APPROACHES

- Elimination
- Symptomatic treatment
- Curative treatment with specific immunotherapy for specific allergens (oral and subcutaneous desensitisation)
- Management of severe asthma with the use of biotherapies
- Treatment of chronic urticaria and angioedema with the use of new drugs
- Treatment of severe and chronic sinusitis belonging to a specific syndrome or not
- Treatment of atopic eczema with the use of new drugs
- Management of auto-immune diseases and immunodeficiencies (biotherapy, gamma-globulin, etc.)
- Adherence, evaluation of usefulness, possible adverse effects and comfort of drug treatments
